

New. 25 March

714 Parry & Palmer is a *Crop-*  
*osite* - have you determined  
it? I have not identified  
it, but turned up since I  
went through the composite.

Ino. 5 leaves, ligules about  
4, <sup>mutator</sup> disk fl. about  
8-10, very hairy, <sup>form</sup> *infructifera*  
enveloped in the large <sup>form</sup> *infructifera*  
scales; pappus none?  
achenes rotten -  
Leaves off -

~~Montague's off?~~

It may be a common plant

W.H.H.  
Did not find Gross 1944 in going  
through the *gamopetalae*
